**ABSTRACT**

State of Indonesia is one country that has the densest population in the world. In such circumstances it is certainly a lot of positive and negative implications for Indonesia. One of the negative effects in these circumstances is rampant cases of irregularities in children include cases of sexual perversion pedophilia. The purpose of this study was to find out or dig up information on preventive measures that do parents who worked as a farmer in the village of Labuhan Ratu Two East Lampung to prevent children from pedophile acts. This study was carried out to obtain comparative preventive measures what would parents do to prevent their children from acts of sexual perversion pedophilia as well as to compare the types of preventive measures that do parents who work as farmers with ordinary parents. From the results informant interviews of five people from five different heads of households, it is known that the preventive measures undertaken parent who works as a farmer to prevent their children from such acts of pedophilia deviation to instill religious values, provide oversight, provide useful busyness, requesting permission when they wanted to leave the house, as well as teach children to dress modestly early. Then based on the comparison of the theory with the results of the study authors, there is no difference of preventive measures to prevent children from acts of pedophilia committed irregularities elderly farmer with ordinary parents.
