NURMALA PUTRI

This research is intended to analyze the effect of education indeks, work labour, and local government expenditure on the Gross Regional Domestic Product (GRDP) of Lampung Province during the period of 2001-2012. This study is motivated by the facts that the Lampung Province Gross Regional Domestic Product has been fluctuated and its value is far from other provinces in Sumatera during the period study. This study makes use of time series data of 2001-2012 and its utilizes regression analysis of “Ordinary Least Square (OLS)” and supporting software from E-views 4.1. Based on the result of the research that education indeks, work labour, and local government expenditure do give a positive impact and significant effect on the fluctuation of Lampung Province GRDP.

Keywords : GRDP, Education Indeks, work labour, local government expenditure, multiple linear regression.
