

ABSTRACT

Identification Sector Base And Inter-Regional Income Inequality in Lampung province Year 2009 - 2013

By

Lina Maulina Syarifudin

Based on the statistical data on the economic contribution of the agricultural sector has declined, as it is not much give added value to other sectors in Lampung province.

The dominance of the agricultural sector led to the development gaps between regions and sectoral imbalances. To know the size of the region inequality indices analyzed by Williamson. Inequality sectoral looked very large due to the dominance of the agricultural sector in GDP Lampung Province.

In order to determine the potential economic sectors that performed the analysis using the Location Quotient. So the analysis is done by separating the role of the agricultural sector and do not take into account the agricultural sector so that would be obtained leading sectors other than agriculture.

Keywords: Base Sector, Income Inequality, and Regional Economy
