This research was based on the condition in school that there are some children who still have low cognitive abilities in recognizing the concept of numbers. The objective of this research was to investigate the increase of 4-5 year old children's concept of numbers ability by using media images. The research method used is the experimental design of one group pretest-posttest design. The research used 13 children as samples by using *purposive sampling* technique, while data analysis technique used was *Wilcoxon*. The results of this study showed that the use of media images can improve the ability of the 4-5 year old children's concept of numbers.

**Keyword:** media images, the ability of the concept numbers, early childhood.
