

V. CONCLUSION

5.1 Conclusion

Considering all data gathered from the research in SMA TRI SUKSES NATAR, the researcher has made some conclusions. They were as follows:

1. _____ students were able to produce the descriptive paragraph writing well. And then, most of them could not be said success in writing, because there were many things should be improved.
2. The descriptive paragraph written by the second year SMA students were considered good. It was said good because the students' descriptive writing could indicate that the content of composition was appropriate with the theme, most of the supporting sentences have supported the main idea. They could describe the main idea or topic sentence satisfactorily. And then from the questionnaire, the researcher concluded that students understood about the topic. It could be seen from their sense and purposeful fragment of their writing.
3. The students' difficulty in grammar covered preposition, singular and plural noun, to infinitive, modals, adjective clause connectors, to be, and present tense. Other difficulties faced by the students were in form of content, form, vocabulary and mechanic.

4. The students are lack of exercise of writing, this matter can be seen from their statement that they did not take any course or almost never exercise to write anything in English out of school time.
5. The students' pessimist were caused by the feel of disability in English neither conversation nor writing.

5.2 Suggestion

Referring to the data and the discussion in previous chapter finally comes to the following suggestions:

1. The students were recommended to have many exercises in writing.
2. The students were recommended to find some technique in order to remember vocabularies.
3. The last but not least, the teacher as motivators should always encourage their students to produce better writing by giving them much practice to write. Teacher should always remember that only practicing make students perfect.
