DAFTAR ISI ...........................................................................................................  i

DAFTAR GAMBAR ............................................................................................... iii

DAFTAR LAMPIRAN ............................................................................................ v

I. PENDAHULUAN
   A. Latar Belakang ................................................................................................. 1
   B. Tujuan Penelitian ........................................................................................... 3
   C. Kerangka Pemikiran ....................................................................................... 3
   D. Hipotesis .......................................................................................................... 5
   E. Manfaat ............................................................................................................ 6

II. TINJAUAN PUSTAKA
   A. Ikan mas ......................................................................................................... 7
      1. Klasifikas dan Morfologi .............................................................................. 7
      2. Habitat dan Distribusi ................................................................................ 8
      3. Kebutuhan Nutrisi ........................................................................................ 9
   B. Bioremediasi .................................................................................................... 9
   C. C/N Rasio ....................................................................................................... 11
   D. Probiotik ......................................................................................................... 12
   E. Molase ............................................................................................................ 13
   F. Kualitas Air .................................................................................................... 14
      1. Suhu .............................................................................................................. 15
      2. Tingkat Keasaman (pH) .............................................................................. 15
      3. Oksigen Terlarut ........................................................................................ 16
      4. Amoniak ...................................................................................................... 17

III. METODE PENELITIAN
   A. Waktu dan Tempat ........................................................................................ 19
   B. Alat dan Bahan ............................................................................................... 19
   C. Rancangan Penelitian .................................................................................... 19
   D. Prosedur Penelitian ....................................................................................... 20
      1. Tahap Persiapan .......................................................................................... 20
         1.1 Persiapan Wadah dan Ikan Uji .............................................................. 20
      2. Tahap Pelaksanaan ...................................................................................... 20
3. Tahap Pengamatan ............................................................. 21
   3.1 Pengukuran Kualitas Air ............................................. 21
   3.2 Laju Pertumbuhan Harian (LPH) ................................. 22
   3.3 Tingkat Kelangsungan Hidup ...................................... 22
E. Analisis Data ....................................................................... 23

IV. HASIL DAN PEMBAHASAN
   A. Hasil Penelitian ............................................................. 24
      4. Kualitas Air ............................................................... 24
         4.1 Suhu ................................................................. 24
         4.2 pH ..................................................................... 26
         4.3 DO (Dissolved oxygen) ........................................... 28
         4.4 Amoniak .......................................................... 30
      5. Laju Pertumbuhan Harian ............................................ 31
      6. Tingkat Kelangsungan Hidup ...................................... 32
   B. Pembahasan ..................................................................... 35

V. SIMPULAN DAN SARAN
   A. Simpulan ......................................................................... 44
   B. Saran ............................................................................. 44
