SHELLA SAPUTRI

The research aimed to knowing the influence of windows movie maker learning media to students' learning result in geography subject of grade X in SMA Al-Kautsar Bandar Lampung in academic year 2014/2015. This research uses quasi experiment method with the pretest-posttest control group design. Sampling was done using purposive sampling technique. The population was X grade students in which the samples were X IIS 3 and X IIS 4. The collecting data is done by documentation and test. Data were analyzed using t-test analysis. The results of the research showed there is positive influence of windows movie maker learning media to students' learning result in geography subject. Data analysis using t-test obtained t test of 10.112, while t table at 5% significance level with degrees of freedom (dk) = 76 is equal to 1,992, we can conclude that t test > t table (10.112 > 1,992) and significance (0,002 < 0,05) and using effect size test Cohen's d of 2,3 with effect size r of 0,99. So it can be concluded that media windows movie maker can have a positive influence of windows movie maker learning media to students' learning result in geography subject of grade X in SMA Al-Kautsar Bandar Lampung with effect size large criteria.

Keyword: media, learning result, windows movie maker.
