This study was conducted in December 2014 in Tanjung Bintang District South Lampung
Regency. This study aimed to determine the nutritional status of kacang goat based on the
feedstuff consumed, crude protein content, and the management of feeding used by the
kacang goat farmers in Tanjung Bintang District. This study used qualitative approach
with survey method, then it was descriptively analyzed. Farmers interviewed came from
six villages namely Jati Baru, Jati Indah, Trimulyo, Srikaton, Budilestari and Serdang.

The result of this study showed the feedstuff mostly in the form of forage. Average dry
matter consumption was 2.07 kg/goat/day, even the dry matter need was 0.61 kg/goat/day,
and average protein consumption was 0.23 kg/goat/day, even the protein need was 0.07
kg/goat/day. Nutritional status of kacang goat in Tanjung Bintang district South Lampung
Regency has fulfilled.

Key words: Kacang goat, crude protein requirement
