**Abstract**

*Performance of public organizations in this context is result or achievement which is have a public organization in realize purpose expect together. Performance of the organization in question is the performance BPPLH of Bandar Lampung in conduction surveillane of solid medical waste management. Solid medical waste is an hazardous and toxic waste, therefore need to get a more intensive supervision, but still solid medical waste found landfills that are not in accordance with its management procedures. This research is a qualitative descriptive study seeks to describe the event or phenomenon in accordance with what is happening in the field, which aims to describe and analyze the performance BPPLH of Bandar Lampung in solid medical waste management oversight hospital. Researchers took a case study research on Badan Pengelolaan dan Pengendalian Lingkungan Hidup (BPPLH) of Bandar Lampung determined by purposive method. The data source is a combination of primary data obtained in the field research was conducted through interviews, and secondary data is obtained from various sources as reference material research writing. Data were analyzed using data reduction and validity of data using triangulation techniques. The results showed that: performance management supervision of RSUDAM and the Medical Hospital of DKT in solid medical waste implemented by BPPLH of Bandar Lampung is not optimal because it is influenced by two factors, namely internal and external factors.*
