COMPARASION THE RESULT OF IPS TERPADU BY USING COOPERATIVE LEARNING TYPE MAKE A MATCH AND TALKING STICK BY FOCUSING ON THE ATTITUDE TOWORDS THE LESSON

By

Ana Purnamasari

This research was aimed at finding the comparison on the average result study of IPS Terpadu by using Make a Match and Talking Stick learning models by focusing on the attitude towards the lesson. The method used was comparative with quasy experimental approach. The population were 101 students with a total sample of 51 students (26 students from VIII B and 25 students from VIII C) which was determined by cluster random sampling technique. The data was be found from dokumentation, test, and questionnaire. Hypotesis testing by using ANAVA and t-test two sample independent. The result showed that: (1) there is the a difference between the average of result study between make a match and talking stick learning model. That matter proved by F_{hitung} is 4,593 with sig. 0,037 < 0,05; (2) there is a difference on the average of result study between students who had positive and negative attitude towards the lesson. That matter proved by F_{hitung} is 32,516 with sig. 0,000 < 0,05; (3) there is an interaction between learning model and attitude towards the lesson. That matter proved by $F_{hitung} > F_{tabel}$ or 13,845 > 4,03 with sig. 0,001 < 0,05; (4) there is a difference on the average of result study by using make a match and talking stick among students who had positive attitude towards the lesson. That matter proved by $t_{hitung} > t_{tabel}$ or 2,171 > 2,048, with sig. 0,039 < 0,05; and (5) there is a difference the average of result study by using make a match and talking stick among students who had negative attitude towards the lesson. That matter proved by $t_{hitung} > t_{tabel}$ or 3,184 > 2,093, with sig. 0,005 < 0,05.
