This research's objectives were to analyze: (1) the level of the community group dynamic on the implementation of GSMK Program in Penawar Tama; (2) the level of community participation on the GSMK Program in Penawar Tama; (3) the relationship between the community group dynamic and the level of community participation in the implementation of the GSMK program in Penawar Tama.

Research conducted at Penawar Tama Sub-District Tulang Bawang. The location determination is done by purposive method. The samples in this study are divided into 2 categories. The first, the community group (Pokmas) used by purposive sampling techniques was taken 14 Pokmas. Secondly, people sample used proportional random sampling technique was taken 98 peoples. Data analysis method used descriptive analysis and for testing of the hypothesis using a non-parametric statistical test *Spearman Rank Correlation*.

The results showed: (1) the level of the community group dynamic (Pokmas) classified into the dynamic category, (2) the level of community participation classified into the high category, and (3) there was a real relationship between the community group dynamic and the level of community participation in the GSMK program in Penawar Tama, it means, that the dynamic level of the community groups (Pokmas) in GSMK program is more dynamic, that the level of community participation in implementing the GSMK program in Penawar Tama Sub-District will go higher.

Keywords: Community group dynamic, Community Participation, GSMK Program
