Environment comprises everything that lies around individuals or groups of people and should have mutual relation of both. Per contra, the surroundings in the vicinity of Dr.A.Dadi Tjokrodipo hospital is polluted by hospital waste. This phenomena puts the inhabitant of Sumur Putri, a sub-region in South Teluk Betung district, in anxiety.

This research was intended to describe the implementation of management function of Environment Control And Supervision or *Badan Pengelolaan dan Pengendalian Hidup* in monitoring and controlling the waste of Dr.A.Dadi Tjokrodipo Regional Public Hospital. The used method was qualitative with case study approach. The techniques of data collection were interview, documenting, and observation. The result of the research showed that the monitoring and controlling process has not been done effectively notably in planning process, actuating process and follow up the polluted. For the planning, controlling is only

conducted once a year whereas the controlling waste must be done atleast . The problem in planning process was lack of human resources to investigate massive number of departments. For the actuating, the controlling and monitoring process was done just as a formality since the lack of supervisors to control the problem in the field. For the follow up the case of polluted, . Environment Control And Supervision considered unfair on applying the law
