Community Service Program/ Kuliah Kerja Nyata (KKN) is a means of implementation and development of science and technology that is implemented outside the campus in terms of time, work mechanism and specific requirements. Students who enrolled in KKN are obliged to make the documentation as an Accountability Report/ Laporan Pertanggungjawaban (LPJ) about the condition and potentials of KKN location, and the activities that carried out during the implementation of KKN. In this study, has been developed an Information System of Village Monitoring and Collecting the Reports of KKN Activity Universitas Lampung to facilitate KKN students in performing the documentation with predetermined format so that the reports be equal. Moreover, this system can become a solution to BP-KKN in retrieving data to determine the condition, potentials, and activities performed at the location of KKN.

Keywords: Development of Information System, Community Service Program/Kuliah Kerja Nyata (KKN), KKN Report, Monitoring of KKN Location.
