

ABSTRACT

LIBRARY INFORMATION SYSTEM DESIGN BASED ON WEB

By:

Firdaus Rosman

Technology implementation has been spread in almost all subjects, even in library. The library has develop rapidly and dynamically, manual system felt like don't useable to handle the job, especially on daily activity in procurement, cataloging, and situation controlling. This situation requires information system use based on computer technology or CBIS (Computer Base Information System).

In this study, an information system based on web is designed in PHP MySQL programming language. This system is expected to handle user need to find information and help the librarian in book data processing. From the result, the study can be implementing as Library Information System Based on Web for schools in Bandar Lampung.
