PNPM-KP is the government's efforts geared towards poverty reduction programs. PNPM-KP itself is an acronym for the National Program for Community Empowerment-Marine and Fisheries, which is one of national projects undertaken by the Indonesian government in order to overcome various problems of poverty that occurred in the community, especially for the people living in coastal areas.

This study aims to examine the impact and benefits the help of the National Program for Community Empowerment Self-Marine and Fisheries (PNPM-MKP). Hypotheses are proposed, is help-MKP PNPM program provides significant improvement of operating income of fishing communities in the village of Padang District Sukajaya Lempasing Mirror Pesawaran District.

The method used is descriptive research method. Table analysis is used to determine the benefits of the aid program PNPM-KP and to test the difference of two averages to determine the change of the level of public revenues between before and after the assistance program PNPM-KP. The population in this study is the overall community program beneficiaries PNPM-KP in the village of Padang District Sukajaya Lempasing Mirror Pesawaran District numbering 86 people, and the overall sampled.

Based on the results of this study concluded that the test results an average difference of two known to calculate the z value $(4.483) > t$ table (1.96) so that H_0 is rejected and H_a accepted a statistically significant increase in average incomes between the post and the business community before the assistance program PNPM-KP in the village of Padang District Sukajaya Lempasing Mirror Pesawaran District, which could increase its revenues by 22.50%. In addition assistance program PNPM-KP also provide benefits in increasing revenues of fishing communities, among others, the assistance provided is used to support businesses that are managed so that it can expand its business and with the help of the program PNPM-KP, communities can increase their business revenue.
