ABSTRACT

IMPLEMENTATION OF THE E-PROCUREMENT SYSTEM OF GOODS AND SERVICES IN THE BINA MARGA LAMPUNG PROVINCIAL

BY

DANISA INNA PUTRISIA

To procurement of goods and services the government running to be maximum then there needs to be some effort. One of the ways conducted by the government is to apply e-procurement in procurement of goods and services government in accordance with instruction presidential regulation no. 54/2010 about procurement of goods and services the government. E-procurement or electronic procurement was the provision of goods and services was conducted using information technology and electronic transaction. With the implementation of e-procurement is expected to reduce fraudulence occurring in procurement of goods and services as well as improve the transparency, effective and efficient.

The purpose of this research is to find how application of the system e-procurement in procurement of goods and services in the Bina Marga Lampung Provinicial. To see how application of the system e-procurement in the bina marga analyzed use the theory of McDermont consisting of 9 indicators is that leadership the government, human resources management, planning and management, e-procurement policy, legislation and regulations, infrastructure and web services, standard, integration the private sector, and the system e-procurement. The research use descriptive type with a qualitative approach.

Based on the research done with components assessment McDermont it can be said that application of the system e-procurement in the bina marga lampung provincial it can be said has been good enough. The problem are the quality of human resources that was still quite lacking in uses information technology, and the committee members who not too much attention to legislation in the implementation of the procurement of goods and services and there are committee members who less understand use internet so that a little the process of inhibiting procurement of goods and services electronically.
