**Venansius Andi Hernawan**

Readiness of a region in implementing regional autonomy can not be separated from the potential and carrying capacity owned area. Readiness area includes natural resources, facilities and infrastructure, the available capital and human resource capacity. The ability of local governments to see the sectors that have the advantages / disadvantages in the region is increasingly important. Sector basis have better prospects for development and is expected to encourage other sectors to thrive. Development sector basis because each region has developed the most dominant sector in which the sector can greatly contribute to regional income. After that local government will take policy in order to promote the sector basis.

This study attempted to examine what is most appropriate policy in order to develop the basic sector sector in a region by selecting the real sectors of the competent. But there is still a question whether the measures taken by the government has been able to accommodate all potential areas concerned. Meanwhile, in the implementation in the area, the concept of the basic sector development do not effectively developed. Furthermore, models are needed that have the concept of developing a focused and integrated mainly oriented to the characteristics and capabilities of potential areas for regional development.

To find out potential base sector in Metro City and the implications of the basic sector firms on the performance of Metro City this research uses analysis tool, which analyzes Quatient Location (LQ). Location Quetiont (LQ) is a comparison of the magnitude of the role of a sector in a region toward the role of the sector in the wider region.

From the calculation base LQ known that the dominant sector in Metro City is the services sector. Transition agriculture sector basis initially and then switch on the service sector led to the

consequence of the construction of Metro Mega Mall shopping center, government buildings, shop houses scattered along the streets of Metro City. Changes in the basic sector in influencing the performance of Metro City Metro City, especially in the economic structure of Metro City. It is expected that with the change in the basic sector is able to increase revenues and improve the welfare of Metro City Metro City community,

Furthermore, if carried out comparisons between the results of calculation with the policies in the Medium Term Development Plan (Development Plan) 2005-2010 in terms of Metro City Metro City government's policy regarding existing policies and programs on strategic plans, policies and programs issued by the City Metro is good and covers all existing real sector in Metro City. In accordance with the vision of its mission is the establishment of Metro City as an education city of beautiful, advanced, prosperous, secure and democratic. With the vision of mission in Metro City Metro City Development Plan, then drawn the conclusion that Metro has been developed in accordance with the vision of his mission.
