

ABSTRACT

The Analysis Of Factors That Effect Good Corporate Governance Implementation Quality

By

Mardiana Sumarta

The aim of this research to examine the effects of growth opportunities, leverage, ownership concentration, firm age, firm size, and profitability to good corporate governance implementation quality on go public companies which included in Corporate Governance Perception Index (CGPI) ranked.

These research samples are the go public companies which are participated and included in corporate governance perception index ranked, which are listed by Indonesian Institute for Corporate Governance (IICG) rules that measure how far a company fulfill the rules of GCG implementation. The research period is from 2004-2008. Data is calculated by eviews 6 program. Unbalanced panel data regression analysis is used to examine the hypothesis of the research which used random effect method.

Result of the hypothesis show that only firm size variable which statistically and positively effects good corporate governance implementation quality. Meanwhile growth opportunities, leverage, ownership concentration, firm age, and profitability variables don't give any effect statistically significant to good corporate governance implementation quality.

Keywords: corporate governance perception index, growth opportunities, leverage, ownership concentration, firm age, firm size, and profitability.
