This research aim to understand the growth of the agricultural sector over the last five years in East Lampung District, to identify the priorities of the agricultural sub-sectors, and to analyze the multiplier effect of the agricultural and the agricultural sub-sectors on the regional revenue in East Lampung.

The location of the study was purposively selected. Data were obtained mostly from the Central Bureau of Statistics and Ministry of Agriculture. The analytical tools are the shift share to determine the agricultural sector growth and the agricultural sub-sectors growth, Location Quotient was used to determine the priorities of the agricultural sub-sectors, and the multiplier effect was used to analyze the multiplier effects of the agricultural sector and the agricultural sub-sectors on the regional revenue in East Lampung.

The results showed that: (1) The growth of the agricultural sector in East Lampung district was slow and uncompetitive, its shift component value minus 63,209,900,000.00 rupiah and differential shift component value minus 32,659,430,000.00 rupiah. (2) The priorities of the agricultural sub-sectors in East Lampung District are the food crops sub-sector, the forestry sub-sector and the fishery sub-sector. Each subsector has LQ value 1.26, 1.03, 1.34 respective. (3) The average short-term of the multiplier effect coefficient for the agricultural sector is 1.90 for each the food crops sub-sector is 4.74; the plantation crops sub-sector is 2.54; the livestock sub-sector is 2.31; the forestry sub-sector is 2.13; and the fisheries sub-sector is 2.57.
