

ABSTRACT

THE INFLUENCE OF EDUCATION LEVEL DIVORCE (Studies in Community District Raja Basa Bandar Lampung Year 2009)

By

NUR MUHAMMAD HASTO

This research aims to see the impact of education on divorce rates. The method used in this research is descriptive research method. Location of the study is Sub Raja Basa Bandar Lampung. The collecting data with questionnaires, interviews and documentation while the technique of data analysis with descriptive data collected is then inserted into a single table to calculate the frequency and percentages. The data has been compiled in the table and then interpreted by the authors in the form of conclusions are easily captured by the reader.

The results showed the level of education is not the only factor affecting the number of divorce in the District of Raja Basa, but fundamental differences in principle also affect the number of divorces. The descriptions of the above conclusions are as follows:

- The link between education levels with the number of divorces seen, that the respondents whose level of education is or is not high enough tends more experienced divorce as many as 11 people or 73.33%. Conversely those with high education level rarely experienced divorce as many as 4 people, or approximately 26.67%.
- It seems that divorce is seen, that the difference principle is the cause of the divorce as many as 11 people or 73, 33% of respondents from 15 respondents.
