

ABSTRACT

THE LEADERSHIP EFFECT OF VILLAGE HEADMAN FAJAR BARU IN INCREASING COMMUNITY PARTICIPATION OF PHYSICAL DEVELOPMENT VILLAGE

By

M. Adi Suhendra

Village Head Fajar Baru Leadership is extremely bad, because it is not able to influence the level of community participation in the physical development of the Village, on the other hand is not a guarantee of a community of people who have higher education levels would indicate a high level of participation of all, the opposite could occur the lower the level of education a society will increasingly high level of participation.

The aim of this study is to analyze the effect of leadership adopted by the village headman of Fajar Baru for increasing community participation in the physical development of the village by using quantitative descriptive method. The analysis method is using the Product Moment Correlation and linear regression.

The calculation result obtained Product Moment correlation coefficient of 0, 216 site between 0.20 to 0.399, which means there is low correlation between the Leadership of Village Headman Fajar Baru with the participation of rural communities in physical development, while large effects caused by the Village

Headman Fajar Baru Leadership on community participation of 4.53%. This condition indicates the statement of hypothesis that submitted authors can be accepted, meaning that the presence of the effect of the Leadership of village headman Fajar Baru on community participation in the physical development of the village.

Keywords: Leadership and Community Participation.
