ABSTRACT

SCRIPT DEVELOPMENT FOR RPC DCOM EXPLOIT ON WINDOWS OPERATING SYSTEM BY USING C LANGUAGE

By
Maria Gusnita Saputri

RPC is a protocol that allows a program running on a host computer and the code of the program can be executed by another host. One of the hole of the Windows OS that might be misused by either crackers or hackers is the RPC protocol (Remote Protocol Call). In this research, RPC DCOM script created by HD Moore is enriched by using a script for an interface so that this application can simplify exploitation of Windows OS. The results of this research is the interface for this application which is more attractive and user friendly.

Key words: RPC (Remote Protocol Call), Exploitation, DCOM
(Distribution component object model)
