ABSTRACT

One role of government in the economy is stabilizing role, is the main food stabilization. One of the interventions made by the government to seek the stability of food prices (rice) is to issue a policy Government Purchasing Price (HPP). But the fact the field showed that the average price of rice in the province of Lampung sealalu has increased every year. Price stability is also affected by factors that affect demand for rice itself. Therefore, this study aimed to determine the effect on demand for rice HPP policy and to determine the effectiveness of HPP policy in maintaining price stability in the province of Lampung. The data used in this study is a data panel on the District / City Lampung 2009-2014.

This study uses a panel regression method to determine the factors that influence the demand for rice and Cusum test to determine the effectiveness of the policy of Government Purchasing Price (GPP). Based on the results of panel regression analysis showed that the government purchase price, the retail price of rice while the negative effect of population, per capita income significant positive effect on demand for rice in the Regency / City Lampung Province in 2009-2013. Based Cusum test results indicate that the government purchase price effectively maintain stability of the retail price of rice in the Regency / City Lampung Province.

Keywords : Government Policy Purchase Price, Rice Retail Price, Corn Retail Price, Population, PerCapita Income, Rice Demand, Panel Regression, Cusum Test.
