5.1 Conclusion

Based on the results of regression and analysis of data on the effect of institutional ownership on company’s value in manufacturing companies listed on the Stock Exchange in 2010-2014, it can be concluded that institutional ownership is not a significantly effect the value of the company on manufacturing companies listed in Indonesia Stock Exchange in 2010-2014.

Another variable that dividend policy, debt policy, and growth of the company, based on the results of regression is shows that all three significantly influence the value of the company. Dividend policy significant positive effect on the value of the company, debt policy significantly negative effect on the value of the company, and the company's growth significantly negative effect on the value of the company.

5.2 Suggestion

Based on the results and conclusions that have been presented, some of the suggestions put forward, that are:
1. Separating the ownership by the parent company and ownership by an external company.

2. Future studies should use institutional ownership variable that put as a moderating variable affecting the independent variable on the dependent variable. Because this study did not find any effect on the value of the company if institutional ownership as the main independent variable, making it possible that the institution has an indirect effect on company’s value.

3. Investors should consider the dividend policy, debt policy and the company's growth that have a significant effect as consideration in making investments in companies, especially manufacturing.
