This study aims to identify and explain the survival strategies of women scavengers. This research was conducted at the landfill Bakung, Bakung Village, District Telukbetung West, Bandar Lampung. This type of research is descriptive with qualitative approach. Informants in this study were four women scavengers head of the family. Data collection techniques in this research using interview techniques. Based on this research, it is known that the survival strategies used by four women scavengers in the face of difficulty meeting the needs of the family is using a strategy of economic and social strategies. Economic strategy is a way to save expenditure and involve family members in order to maximize efforts and work together to find a source of additional income for the sake of fulfilling the needs of the family. While social strategy is debt or borrow money and follow the productive organizations (such as social gathering) that exist around the residence.
