Abstract  

This research aims to find a causal relation between the intensity of drug abuse, is there a relationship between these variables and how strong the relationship between the both of those variables. This research was conducted in three different areas, namely Terbanggi Besar, Gunung Sugih, and Anak Tuha district’s, with society respondent and with amount sample of 100 peoples from three regions. The method that used in this research is Quantitative Correlational method. The result based on this research showed that the level of drug trafficking and crime that occurred was at a high level, with the shape of a “brutal” criminal because of death in most of the victims. Based on the correlation test of kendall’s obtained a value of 0.542, it is stated that there is a positive relationship between the both of those variables: the intensity of drug abuse and the increasing of crime with strong level relationship.

Keywords: relationship, drugs abuse intensity, level of criminality, society.
