This study discusses the analysis of the influence of education and work experience to the understanding of government officials concerning the application of the principle of accountability. The purpose of this study was to examine whether the education and work experience have a significant effect on the government officials understanding of the application of the accountability principle in the Unit Level of Department / Agency of Tulang Bawang Barat. The type of research used in this study is quantitative explanation with associative approach. Techniques of data collection are using questionnaires, interviews and data processing, data entry, data transfer (data entering), and presentation of data ( output data ) using SPSS. Analysis method of the data using the normality test, regression test, determination and correlation test, as well as t test and F test for testing the hypothesis.

Based on the hypothesis test using the t test, it is stated that education does not significantly affect the understanding of government officials concerning the application of the principles of accountability whereas work experiences significantly influence the understanding of government officials concerning the application of the principle of accountability. Data, based on the f test, stating that education and work experience simultaneously, significantly influence the understanding of government officials concerning the application of the principle of accountability of 21.2 % while the remaining 78.8 % is explained by other factors that are not included in the model or in beyond this study.

**Keywords:** Education, Work Experience, and the principle of accountability.
