

ABSTRAK

PERILAKU MURAI BATU (*Copsychus malabaricus*) SIAP PRODUKSI

Oleh

Agung Dwi Saputro

Penelitian ini bertujuan untuk mengetahui perilaku (perilaku ingestif, perilaku diam, dan perilaku kawin) burung murai batu yang siap berproduksi. Penelitian ini telah dilaksanakan pada Maret 2016 di penangkaran murai batu milik Bapak Wahidin, Desa Seputih Mataram, Bandar Jaya, Lampung Tengah. Objek yang diamati adalah 10 pasang murai batu siap produksi. Data perilaku murai batu diambil melalui pengamatan perilaku dan direkam menggunakan kamera video. Data yang diperoleh dianalisis secara deskriptif dengan menjelaskan segala yang terjadi di tempat penelitian dalam hal perilaku murai batu siap produksi.

Hasil penelitian menunjukkan rata-rata persentase perilaku murai batu meliputi perilaku makan, minum, dan membersihkan paruh pada betina lebih tinggi dibandingkan dengan jantan. Rata-rata persentase perilaku murai batu meliputi perilaku bertengger, istirahat, mendekati betina, dan berjemur pada jantan lebih tinggi dibandingkan dengan betina. Perilaku murai batu dapat menunjukkan kesiapan produksi murai batu.

Kata kunci : Murai batu, perilaku murai batu, dan kesiapan produksi.

ABSTRACT

THE BEHAVIOURS OF WHITE RUMPED SHAMA (*Copsychus malabaricus*) READY TO PRODUCTION

By

Agung Dwi Saputro

This research aimed to know the behaviours of (ingestif behaviour, idle behaviour and mating behaviour) white rumped shama which ready for production. This research was held on March 2016 in Mr Wahidin's white rumped shama captivity, Seputih Mataram, Bandar Jaya, Central Lampung. The object being observed are 10 pairs of white rumped shama that are ready for production. The behaviour's data of white rumped shama taked by behaviour observation and recorded using a video camera. The Data analyzed descriptively by explain everything that happened in the research location of the behaviour of white rumped shama that are ready for production.

The results showed the average percentage of white rumped shama's behaviour includes of eating, drinking, and clean up of beak in females higher than males. The average percentage of white rumped shama's behaviour includes of perching, resting, approached, and basking in males higher than females. White rumped shama behaviour cans indicate the readiness of white rumped shama's production.

Keywords: *White rumped shama, white rumped shama behaviour's, and production readiness.*
