

ABSTRACT

RELATIONSHIP BETWEEN PARITY WITH PREMATURE RUPTURE OF MEMBRANES AT RSUD DR. H. ABDUL MOELOEK PERIOD MARCH-AUGUST 2017

By

AULIA ULFA RAYDIAN

Background: Early rupture of labor is at high risk for maternal and infant death, which is one of the causes of parity. Parity one of the factors occurs premature rupture of membranes where maternal women with multiparity tend to be more susceptible to experience premature rupture of membranes. The purpose of this research is to determine the relationship between parity and PROM during inpartu.

Methods: This research used observational analytic method with cross sectional design. A total sample of 249 patients were selected with consecutive sampling technique. Data collected from patient's medical record in obstetric room of RSUD Dr. H. Abdul Moeloek Lampung Province. The inclusion criteria of this research is the birth mother of KPD. Patients were accompanied by parity data inaccuracies, and damaged medical records were excluded from the study sample.

Results: The results showed that as many as 59 patients (23.69%) experienced KPD moment and as many as 31 (12.44%) patients who experienced KPD with multiparity. Based on Chi-square test, $p = 0.031$ ($p < 0.05$) was obtained.

Conclusions: There is relationship between an early rupture membrane with parity of the mother inpartu in Dr. H. Abdul Moeloek

Keywords: Premature rupture of membranes, Parity.

ABSTRAK

HUBUNGAN PARITAS DENGAN KEJADIAN KETUBAN PECAH DINI DI RSUD DR. H. ABDUL MOELOEK PROVINSI LAMPUNG PERIODE MARET- AGUSTUS 2017

Oleh

AULIA ULFA RAYDIAN

Latar Belakang: Persalinan dengan ketuban pecah dini berisiko tinggi terhadap kematian ibu dan bayi, yang mana salah satu penyebabnya adalah paritas. Paritas salah satu faktor terjadi ketuban pecah dini dimana ibu bersalin dengan multiparitas cenderung lebih mudah terjadi mengalami KPD. Tujuan dari penelitian ini untuk mengetahui hubungan paritas dengan kejadian KPD pada ibu bersalin.

Metode: Penelitian ini menggunakan metode analisis observasional dengan rancangan cross sectional. Sebanyak 249 sampel dipilih dengan teknik pengambilan sampel berturut-turut. Data dikumpulkan dari rekam medik pasien di ruang kebidanan RSUD Dr. H. Abdul Moeloek Propinsi Lampung. Kriteria inklusi dari penelitian ini adalah ibu kelahiran KPD. Pasien disertai ketidakakuratan data paritas, dan rekam medis yang rusak dikeluarkan dari sampel penelitian.

Hasil: Hasil penelitian menunjukkan bahwa sebanyak 59 pasien (23,69%) mengalami kejadian KPD dan sebanyak 31 (12,44%) pasien yang mengalami KPD dengan multiparitas. Berdasarkan uji Chi-kuadrat, $p = 0,031$ ($p < 0,05$) diperoleh.

Kesimpulan: Terdapat hubungan ketuban pecah dini dengan paritas ibu inpartu di Dr. H. Abdul Moeloek.

Kata Kunci: : Ketuban pecah dini, Paritas.
