

## ABSTRACT

### DIFFERENCES OF *MINI-CEX* SCORE BETWEEN CLERKSHIP ON FIRST STATION AND LAST STATION IN OBSTETRIC AND GYNEKOLOGY DIVISION DR.HI.ABDUL MOELOEK BANDAR LAMPUNG

By

ZULFIKAR MS

**Background:** During clerkship, undergraduated students' learning outcomes will be evaluated. The evaluation will be used to measure the competencies have been fulfilled. Mini clinical evaluation exercise (mini-CEX) is one of instruments used to evaluate undergraduated students' clinical skills. Mini-CEX is done only in clinical study that clerkships of the first station who still haven't got any experiences of doing ini-CEX compared to clerkships of the last station who have done this test from times to times..

**Methods:** This research was a quantitative study of analitical comparative method with cross sectional approach. Samples of this research consisted of the first and last station clerkships in Obstetric Gynecology Division of 80 samples respectively. This research used secondary data of mini-CEX scores obtained from Obstetric Gynecology Division of Dr. Hi. Abdul Moeloek Hospital Bandar Lampung..

**Results:** Univariate analysis of the first and last station clerkships' mini-CEX scores showed value of 66 (55-83) and 72 (50-83) respectively. Mann Whitney test of mini CEX scores showed p-value of 0,001 ( $p < 0,5$ ).

**Conclusion:** It can be concluded that there was differences between mini-CEX scores of the first and last station clerkships in Obstetric Gynecology Division of Dr. Hi. Abdul Moeloek Hospital Bandar Lampung.

**Keywords:** Clerkship, *mini-CEX*, obstetric gynecology

## ABSTRAK

### PERBEDAAN SKOR *MINI-CEX* DOKTER MUDA STASE PERTAMA DAN STASE TERAKHIR PADA STASE OBSTETRI GINEKOLOGI RUMAH SAKIT Dr.Hi.ABDUL MOELOEK BANDAR LAMPUNG

**Latar belakang:** Selama kepaniteraan klinik hasil belajar dokter muda akan dievaluasi. Evaluasi hasil belajar digunakan untuk mengetahui kompetensi yang harus dicapai sudah terpenuhi. *Mini clinical evaluation exercise (mini-CEX)* merupakan salah satu instrumen yang digunakan untuk mengevaluasi kemampuan klinis dokter muda. *Mini-CEX* dilakukan hanya pada tahap pendidikan klinik sehingga dokter muda stase pertama belum memiliki pengalaman melakukan *mini-CEX* berbeda dengan dokter muda stase akhir yang sudah melakukan berkali-kali.

**Metode penelitian** Penelitian ini merupakan penelitian kuantitatif berupa metode analitik komparatif dengan pendekatan *cross sectional*. Sampel penelitian merupakan dokter muda stase pertama dan stase akhir pada stase Obstetri Ginekologi dengan jumlah sampel masing-masing 80 sampel. Penelitian ini menggunakan data sekunder berupa nilai *Mini-CEX* yang didapatkan dari Bagian Obstetri Ginekologi Rumah Sakit Dr. Hi. Abdul Moeloek Bandar Lampung..

**Hasil penelitian:** Hasil uji univariat pada nilai *mini-CEX* dokter muda stase pertama dan stase terakhir sebesar 66 (55-83) dan 72 (50-83). Uji *Mann Whitney* pada nilai *mini-CEX* didapatkan nilai  $p=0,001$  ( $p<0,5$ ).

**Kesimpulan:** Terdapat perbedaan antara nilai *mini-CEX* dokter muda stase pertama dan stase akhir pada stase Obstetri Ginekologi Rumah Sakit Dr.Hi. Abdul Moeloek Bandar Lampung.

**Kata kunci:** dokter muda, *mini-CEX*, obstetri ginekologi
