ABSTRACT

MAKING POTATO SPIRAL CUTTING TOOLS

by

M.IRFAN LIANTO

In order to increase productivity and to follow the progress of emerging technologies principled efficient and effective for cutting spiral potato with better results, in which potatoes are used as raw materials to make snacks. So they make a spiral potato cutter tool. This tool is made for menjembati sophisticated technology with appropriate technologies is usually done in the home industry.

This tool is used in the manufacture of materials quality and economical. To order parts using the tool made by stainless steel on the blades and casing.

The results obtained in the manufacture of spiral potato cutter is a tool capable of cutting with an average capacity of up to 271.25 grams of potatoes. This spiral potato cutter tool proved to be more effective and efficient than manual cutting with a knife. It can be seen from the results and the production capacity of potato spiral cutting tools.
