

ABSTRACT

STUDY OF THE EXPLORATION OF POLICY STUDIES PUBLIC PRIVATE PARTNERSHIP ON PDAM WAY RILAU BANDARLAMPUNG CITY

By

DEVY SEPTI HERYANI

Public Private Partnership is a cooperation in the provision of infrastructure (provision of toll roads, electricity, drinking water and sanitation) between the governments of either the central government or local governments with partners of private business entities, both business entities within the country and abroad. The purpose of this research is, 1) Knowing the types of partnership are implemented by PDAM Way Rilau, 2) Evaluating policy formulation of PPP conducted by PDAM Way Rilau, dan 3) See the estimates of the impact of the PPP of PDAM Way Rilau in the determination of tariffs, the distribution and production aspects.

The research metode used was type of descriptive study with a qualitative approach method. The results showed that the form of cooperation to be implemented in the form of cooperation form BOT (*Build, Operate, Transfer*) and process of formulation of the policy issues, the formulation of proposals for policy and endorsement policy. PPP in PDAM Way Rilau is expected to increase the production of clean water, raw water supply, lowering the level of water loss, increasing the number of customers and expanding service coverage. Whereas the determination of the price of drinking water though the PPP is expected to be cheaper than drinking water tariff rates of drinking water from PDAM. In conclusion, PPP is expected can improve any aspect that can improve the acceptance of cash donations area.
