

ABSTRACT

THE PROJECT BASED LEARNING MODEL TO INCREASE PROBLEM SOLVING SKILL AND THE LEARNING RESULT OF THE STUDENT IN IV A CLASS AT SD NEGERI 1 METRO PUSAT 2013/2014th

By

ANNISA YULISTIA

The research was based by the low of problem solving skill and the learning result of student in IV A class at SD Negeri 1 Metro Pusat on thematic learning. The aims of this research were to increase the problem solving skill and the learning result of the students through the implementation of project based learning model.

The kind of this research was Classroom Action Research (CAR). This research have done for two cycles. Every cycles consist of four step (planning, acting, observing, and reflecting). The instrument of data collection used observation sheet and test. The technique of data analyze used qualitative and quantitative technique.

The result of the research showed that the implementation of project based learning model can increase the problem solving skill and the learning result of the students. This case can be seen from the average score of the students' problem solving skill in first cycle was 63,47 (C+) and second cycle was 79,03 (B+). Average of affective study result in first cycle was 60,26 (C) and second cycle was 81,30 (A). Average of cognitive study result in first cycle was 63,7 (C+) and second cycle was 81,18 (A). Implementation of project based learning model can increase problem solving skill and the learning result on thematic learning in IV A class at SD Negeri 1 Metro Pusat.
