Abstract

Analysis of Bandar Lampung City Regional Development Performance and Economic Shifting

by

Anda Laksmana

This research is aimed at: (1) analyzing regional development in Bandar Lampung City, and (2) analyzing the shifting of economic sector in Bandar Lampung City. Data used are secondary data. The research employs comparison and proportion to analyze the regional growth in Bandar Lampung City. The shifting share, location quotient, and the multiplier effect analyses are used to measure the shifting of the economic sector in Bandar Lampung City.

The research showed that: (1) the regional development in Bandar Lampung City consisting of physical aspects of space, economy, and social is included into a growing category. This is demonstrated by the comparative value and proportion value of more than 1, and (2) economy in Bandar Lampung City shifts towards secondary and tertiary sectors in the Gross Domestic Regional Product. The primary sector (agricultural sector) develops relatively slowly. The values of proportional growth, share of regional growth, and net shift are respectively -0.181; -0.024; and -0.205. Meanwhile, sectors growing rapidly and competitively are finance, leasing, and service companies with index values of 1.052; 0.002; 1.504 respectively.
