Abstract

Limited from the ability of environment to meet the needs of human for the generation now and the future led to the necessary arrangements good for processing and purification of minerals and coal. Natural resources must be managed and wide web is as good as possible in order to remain incapable of supporting development activities in order to provide welfare on society. Arrangement that exists when and that raises various problems. Starting from an early stage of permission exploration up to do marketing mine indonesia. The lack of setting upon Indonesian natural wealth make Indonesia as state of being consumptive. Should Indonesia capable of being state productive. Based on these phenomena needs to be done arrangement reexamined over government policy. Reformation of regulations to be done on the policy and the arrangement of law that cannot accommodate empirical fact and juridic fact that occurs in the management of the quarry.

Keywords: reform, policy, and mining.
