

ABSTRAK

ANALISIS HUBUNGAN BELANJA INFRASTRUKTUR TERHADAP INVESTASI SWASTA (PMA DAN PMDN) DI PROVINSI LAMPUNG

Oleh

DENDI WAHYUDI

Penelitian ini bertujuan menganalisis hubungan belanja infrastruktur (jalan, irigasi, dan jaringan) terhadap investasi swasta (PMA dan PMDN) di Provinsi Lampung pada tahun 2004 – 2011. Penelitian ini menggunakan alat analisis koefisien korelasi. Hasil penelitian menyimpulkan bahwa belanja infrastruktur berkorelasi positif secara erat dan signifikan terhadap investasi swasta di Provinsi Lampung. Hal ini berarti bahwa setiap kenaikan belanja infrastruktur diikuti juga dengan kenaikan investasi swasta. Namun selama periode tahun 2004 – 2011 investasi di Lampung mengalami fluktuasi. Hal tersebut dikarenakan oleh beberapa faktor, yakni: Pertama, Lampung termasuk daerah yang terkena dampak krisis global. Kedua, karena kondisi infrastruktur belum sepenuhnya menunjang. Dan ketiga, kebijakan nasional yang belum optimal penerapannya di Provinsi Lampung.

ABSTRACT

ANALYSIS CORRELATION OF INFRASTRUCTURE EXPENDITURE TO PRIVATE INVESTMENT (PMA AND PMDN) IN THE LAMPUNG PROVINCE

By

DENDI WAHYUDI

This study aims to analyze the correlation between infrastructure spending (roads, irrigation, and networking) to private investment (domestic and foreign) in Lampung Province in the year 2004 to 2011. This study uses correlation coefficient analysis tool. The research concludes that infrastructure spending is closely correlated positive and significant impact on private investment in the province of Lampung. This means that any increase in spending on infrastructure followed by the increase in private investment. However, during the period 2004 - 2011 investment in Lampung fluctuated. This is due to several factors, namely: First, Lampung including areas affected by the global crisis. Second, because the condition is not fully supporting infrastructure. And third, the national policy is not optimal application in Lampung province.
