ABSTRAK ........................................................................................................ i
LEMBAR PEGESAHAH ................................................................................ ii
DAFTAR ISI ................................................................................................... x
DAFTAR TABEL ............................................................................................. xiii
DAFTAR GAMBAR ....................................................................................... xiv

I. PENDAHULUAN ................................................................................ 1
   A. Latar Belakang .................................................................................. 1
   B. Tujuan Penelitian .......................................................................... 3
   C. Manfaat Penelitian ....................................................................... 3
   D. Kerangka Pemikiran .................................................................... 4
   E. Hipotesis ......................................................................................... 5

II. TINJAUAN PUSTAKA ........................................................................ 6
   A. Ikan Nila ....................................................................................... 6
      1. Klasifikasi Ikan Nila ................................................................ 6
      2. Morfologi Ikan Nila .................................................................. 7
      3. Habitat Dan Kebiasaan Hidup Ikan Nila ......................... 8
   B. Laju Pertumbuhan Spesifik / Spesific Growth Rate (SGR) ....... 9
   C. Sintasan / Survival Rate (SR) ...................................................... 11
   D. Pakan Ikan .................................................................................. 12
      1. Pakan Alami (Daun Kimpul) ............................................... 14
III. METODE PENELITIAN ................................................................. 19

A. Waktu dan Tempat Penelitian ...................................................... 19
B. Alat dan Bahan ............................................................................. 19
C. Metode Penelitian ........................................................................ 20
D. Pelaksanaan Penelitian ................................................................. 20
   1. Persiapan Akuarium................................................................. 20
   2. Persiapan Ikan................................................................. 21
   3. Aklimasi ........................................................................ 21
   4. Persiapan Pakan Alami............................................................. 21
   5. Persiapan Taurin ................................................................. 23
   6. Dosis Takaran Penggunaan Taurin .......................................... 23
   7. Pemberian Pakan ................................................................. 23
   8. Pengambilan Data ................................................................... 24
   9. Sampling Kualitas Air ............................................................. 24
E. Parameter Penilitian ...................................................................... 24
   1. Laju Pertumbuhan Spesifik (SGR) ............................................. 24
   2. Panjang Tubuh, Berat Tubuh, dan Lingkar Tubuh ............... 25
   3. Kelulushidupan ...................................................................... 25
   4. Ratio Konversi Pakan ............................................................. 25
F. Analisis Data ................................................................................ 25
IV. HASIL DAN PEMBAHASAN ......................................................... 26

A. Pemberian Pakan Pada Empat Perlakuan Penelitian Terhadap Pertumbuhan Ikan Nila (Oreochromis niloticus) ................. 26
B. Laju Pertumbuhan Spesifik (Specific Growth Rate/SGR) .. 31
C. Pemberian Pakan Pada Empat Perlakuan Penelitian Terhadap Kelulushidupan Ikan Nila (*Oreochromis niloticus*) .......... 32

D. Ratio Konversi Pakan (*Food Conversion Ratio/ FCR*) ...... 34

E. Kualitas Air ........................................................................ 35

V. KESIMPULAN DAN SARAN ............................................. 37

A. Kesimpulan .......................................................................... 37

B. Saran .................................................................................. 37
