

V. CONCLUSION AND SUGGESTION

This chapter is the final chapter of this research report. This chapter presents the conclusion of the research findings and suggestions for English teacher who want to try to use Clamshell as the alternative technique to teach speaking and for those who want to conduct similar research using Clamshell as the technique.

5.1 Conclusions

Based on the findings in the fields and from the statistical report in the last chapter, some of conclusion can be drawn as follows:

1. There were significant improvements found in the research. It can be seen from the statistical report in the chapter before. The t-value in this research was more than t-table and the significance score was less than 0.05. There were significant improvements in all aspects of speaking. It shown from the t-table of every aspect which has bigger value than t-table sand the significance was less than 0.05.
2. The most significance increase among all aspects is fluency. It shown from the gain of each aspect. Fluency became the aspect which is most significantly increased by 3.5 gains.

5.2 Suggestions

Referring to the conclusions above, the researcher's suggestion can be listed like the followings:

5.2.1 Suggestions for English Teachers

- The teacher should give more attention to the students who has difficulties in English. For example: The teacher can ask the students to practice how to pronounce the word.
- The English teachers who want to apply Clamshell are suggested to focus on certain aspects of ability to increase. It is done in order to ease the students. If the teachers do not focus on certain aspects of ability, the students will get confused since there are aspects of ability that they have to look for.
- Don't correct student's grammatical errors in order to improve their confidence. The more confidence of students, the bigger the chance of this technique objective to be succeeded.
- In the teaching learning process which uses Clamshell, the students should be more active than teacher. So, the teacher should give more attention to the student who makes noise in the class.

5.2.2. Suggestion for further researcher

- Choose the right sample and population will help us in conducting the research using Clamshell as a technique in it.
- Conduct the research in longer treatment to get better result and to decrease the chance of failure.
- Make sure that you can control the whole class. Don't let the students to make a noise in the class and make sure that all of the students in the class are under your observation.
- Use a suitable standardization in scoring their speaking in test
