Meidiana

The success of economic development of a country can be measured and described in general by the rate of economic growth. Indicators used to measure the success of economic development include economic growth as measured by gross domestic product growth rate. Indonesia GDP growth rate from year to year can be seen from the role of exports as a driver for growth economics. Indonesia as a developing country, sejak the 1980s have used the export policy to encourage economic needs. Since then export to the attention of the spur economic growth in Indonesia. The problem is the fact that exports are not proportional to the amount of imports in Indonesia.

The purpose of this study was to determine the effect of exports, inflation, and exchange rate against Indonesian economic growth. The data used is the time series data for the period 2003.1-2010.12. dieztimasi models using Ordinary Least Square or OLS.

The estimation results menunjukkan that together and partially all independent variables in the research model real and significant effect on economic growth in Indonesia. Results of the study found that the relationship of each variable compatibility with theories and hypotheses proposed.

Keywords: economic growth, exports, inflation, exchange rate, Ordinary Least Square (OLS)
