Precipitated Silica plant with materials sugarcane bagasse is planned to be built in Terusan Nunyai, Lampung Tengah. Establishment of this plant is based on some consideration due to the raw material resources, the transportation, the labor availability and also the environmental condition. This plant is meant to produce 40.000 tons/year precipitated silica with operation time 24 hour/day, 330 hour/year. Raw materials used consist of sugarcane bagasse 27.770,7367 kg/hour. The utility units consist of water supply system, instrument air supply system, electrical supply system and waste treatment system.

The business entity form is Limited Liability Company (Ltd) using line and staff organizational structure with 192 labors.

From the economic analysis, it is obtained that:

<i>Fixed Capital Investment</i>	(FCI)	=	Rp. 907.785.874.965,-
