DAFTAR ISI .................................................................................................................. ii
DAFTAR TABEL ........................................................................................................ v
DAFTAR GAMBAR ...................................................................................................... ix

I. PENDAHULUAN ........................................................................................................... 1
   A. Latar Belakang dan Masalah .............................................................................. 1
   B. Tujuan Penelitian ............................................................................................ 3
   C. Kerangka Pemikiran ........................................................................................ 3
   D. Hipotesis ........................................................................................................... 5

II. TINJAUAN PUSTAKA .................................................................................................. 6
   A. Ubi Jayu ............................................................................................................. 6
   B. Pati .................................................................................................................... 10
      C. Sifat Fisikokimia Pati ................................................................................... 12
   D. Tapioka ............................................................................................................ 14
   E. Ekstraksi Tapioka ............................................................................................ 16
      1. Pemarutan ...................................................................................................... 17
      2. Pengendapan .................................................................................................. 18
      3. Pengeringan .................................................................................................. 19
   F. Fermentasi dan Modifikasi Tepung Ubi kayu .............................................. 20

III. BAHAN DAN METODE .......................................................................................... 26
   A. Tempat dan Waktu Penelitian ....................................................................... 26
   B. Bahan dan Alat ................................................................................................. 26
C. Metode Penelitian .................................................................27
D. Pelaksanaan Penelitian ..........................................................28
E. Pengamatan ...........................................................................29
   1. Derajat Keasaman (pH) Filtrat dan Tapioka.................................29
   2. Bentuk Granula Pati..................................................................30
   3. Sifat Amilograf ........................................................................30
   4. Derajat Putih ............................................................................31
   5. Kadar Air ...............................................................................31
   6. Kadar Abu .............................................................................32
   7. Kadar Pati ...............................................................................32
   8. Kadar Amilosa dan Amilopektin .............................................34

IV. HASIL DAN PEMBAHASAN .........................................................37
   A. pH Filtrat ..............................................................................39
   B. pH Tapioka ...........................................................................42
   C. Bentuk Granula Pati ..............................................................44
   D. Sifat Amilograf .......................................................................47
   E. Derajat Putih ..........................................................................50
   F. Kadar Air ...............................................................................52
   G. Kadar Abu ............................................................................55
   H. Kadar Pati ...............................................................................57
   I. Kadar Amilosa dan Amilopektin .............................................59

V. KESIMPULAN DAN SARAN ......................................................63
   A. Kesimpulan ...........................................................................63
   B. Saran ....................................................................................63
