

ABSTRAK

PENGEMBANGAN DESAIN PEMBELAJARAN MODEL *PROBLEM BASED LEARNING* UNTUK MENINGKATKAN KEMAMPUAN PESERTA DIDIK KELAS IV SD ALAM ALKARIM LAMPUNG

Oleh

Nanang Saputro

Tujuan dari penelitian ini adalah untuk mengembangkan model pembelajaran berbasis masalah untuk siswa kelas IV SD dalam rangka meningkatkan kemampuan komunikasi mereka. Penelitian ini merupakan penelitian dan pengembangan (R&D) yaitu penelitian Borg dan Gall yang diperkuat dengan model pengembangan desain ADDIE. Jenis penelitian yang dilakukan adalah penelitian True Experimental dengan desain post-test only control group design. Teknik pengumpulan data meliputi tes dan non tes. Keefektifan model pembelajaran berbasis masalah ditentukan melalui analisis data menggunakan uji-t. Hasil penelitian menunjukkan bahwa $t_{hitung} > t_{tabel}$ ($9,84 > 2,012$) ditolak pada taraf signifikansi 5%, sedangkan H_0 diterima dan didukung oleh observasi kemampuan komunikasi siswa pada enam pelajaran yang menunjukkan rata-rata 80,07 persen dari 24 siswa di kategori sangat baik. Dengan demikian, dapat disimpulkan bahwa model desain pembelajaran berbasis masalah efektif dalam meningkatkan kemampuan komunikasi.

Kata Kunci: Desain Pembelajaran, Kemampuan komunikasi, *Problem based learning*

ABSTRACT

THE DEVELOPMENT OF A PROBLEM-BASED LEARNING DESIGN MODEL TO IMPROVE STUDENT' COMMUNICATION SKILLS IN GRADE 4 SD ALAM AL KARIM LAMPUNG

By

Nanang Saputro

The purpose of this study was to develop a problem-based learning model for fourth grade elementary school students in order to improve their communication skills. This research is a research and development (R&D) research by Borg and Gall which is strengthened by the ADDIE design development model. The type of research that was conducted was True Experimental research with a post-test only control group design. Data collection techniques included tests and non-tests. The effectiveness of the problem-based learning model was determined through data analysis using the t-test. The results indicated that $t_{\text{arithmetic}} > t_{\text{table}}$ ($9.84 > 2.012$) was rejected at a 5% significance level, while H_a was accepted and supported by observations of student communication skills in six lessons, which revealed an average of 80.07 percent of 24 students in the very good category. As a result, it can be concluded that the design model for problem-based learning is effective at improving communication skills.
