ABSTRACT

PARTICIPATION OF FARMER GROUP MEMBERS IN THE INDEPENDENT PROSPEROUS VILLAGE PROGRAM IN REJO ASRI VILLAGE, SEPUTIH RAMAN DISTRICT, CENTRAL LAMPUNG REGENCY

By

FIFI SILVIANA

This study aims to determine the level of participation of farmer group members, factors influencing the participation of farmer group members, the sustainability of healthy rice farming, and the influence of farmer group members' participation on the sustainability of healthy rice farming. This study used a survey method with respondents totaling 50 healthy rice farmers. The selection of the research site was carried out intentionally (purposively) with the consideration that the village has the most active farmer group and received the Independent Prosperous Empowered Village Program and as a cluster for cultivating healthy rice farming in Seputih Raman District. The results showed that the participation rate of farmer group members in the Independent Prosperous Empowered Village program at the planning stage was included in the category of sufficiently participating (56% respondents), at the implementation stage it was included in the category of highly participating (80% respondents), at the benefit stage it was included in the category of highly participating (72%), and at the evaluation stage it was included in the category of highly participating (74%). The motivation of farmers and the role of agricultural extension workers affect the level of participation of farmer group members in the program. The sustainability of healthy rice farming is seen from economic aspect, environmental aspect, and social aspect are included in the category of very sustainable. The level of participation of farmer group members in the program affects the sustainability of healthy rice farming with an r-square value of 0.553.
