A plant to produce dicalcium phosphate dihydrate from phosphoric acid and calcium hydroxide, is planned to be located at Gresik, East Java. The plant is established by considering availability of raw materials, transportation facilities, readily available labor and environmental conditions.

Capacity of the plant is 60.000 tons/year operating 24 hour/day and 330 working days/ year. The plant required 4.452,728 kg/h of phosphoric acid; 3.362,264 kg/h of calcium hydroxide.

Quantity of labor is around 131 people. The plant is managed as a Limited Liability Company (PT), which is headed by a Director. The company is organized in the form of line and staff structure.

From analysis of the plant economy is obtained:

<i>Fixed Capital Investment (FCI)</i>	= Rp. 1.182.561.517.603,350
<i>Working Capital Investment (WCI)</i>	= Rp. 208.687.326.635,885
<i>Total Capital Investment (TCI)</i>	= Rp. 1.391.248.844.239,-
<i>Break Even Point (BEP)</i>	= 51,87 %
<i>Shut Down Point (SDP)</i>	= 26,74 %
<i>Pay Out Time after Taxes (POT)_a</i>	= 3,21 tahun
<i>Return on Investment after Taxes (ROI)_a</i>	= 18,004%
<i>Discounted Cash Flow (DCF)</i>	= 30,83%

By considering above the summary, it is suitable study further the n-butanol plant since plant is profitable and has good prospects.
