This research have a purpose to determine teenagers perspective about virginity. In addition, the purpose of this research, also to examine the behavioral theory which explain that the theory of perception always affect human actions. The research was conducted at Gajah Mada Senior High School at Bandar Lampung. The type of this research is explanatory with a quantitative approach and 95 respondents sample. Data collection techniques in this research using questionnaire, interview, observation, and literature study. While the data analysis was done with normality test, linearity test, and correlation analysis through statistical data processing programs, namely SPSS. Based on the survey results we can concluded that most of teenagers, especially students at Gajah Mada Senior High School Bandar Lampung have a positive perceptions related to the perspective of virginity and teenagers always keep their virginity until they get married. Behavioral theory proved correct, and can be evidenced in this research. Teenagers which have a positive perspective will always keep their virginity. And the other result shows, teenagers which have another perspective about virginity mention that virginity is not important things, they always ignore the value of virginity in herself. So that is true, that the perception continues to influence human actions or behavior. Result of this research, H_a accepted and H_o rejected, have a meaning that there is a relationship between perceptions of virginity with the intensity of premarital sex among teenagers.
