One of problems in development of Sindang Pagar village is unstructured infrastructure development especially road development, so that ability of the chief of village is required to overcome the problem.

The objective of this research was to find out the leadership style of chief of village in developing infrastructure. This was a descriptive qualitative research. Data were collected with observations, interviews, and documentations. This research was conducted in Sindang Pagar village, of Sumberjaya sub district in West Lampung district. Informants were chief of Sindang Pagar village, apparatus of village government, chief of sub village, and public in Sindang Pagar village.

The results showed that the leadership style of chief of Sindang Pagar village in developing infrastructures could be categorized into democratic leadership style, and this could be seen from principles of participation, friendly human

relationship between ordinate and subordinates, and between leader and public, in realizing infrastructure developments in Sindang Pagar village. Implications from democratic leadership were: a) encouraging public participation in developing infrastructures; b) transparency/openness between leader and public in developing infrastructures/administration of village; c) discretion of leader to conduct his tasks related to infrastructure developments; d) the way to use in overcoming problems was consensus and deliberation.

Keywords : leadership style of chief of village, infrastructure development
