

ABSTRACT

ANALYSIS OF FINANCIAL PERFORMANCE AMONG LOCAL
TELECOMMUNICATIONS (PMDN) TELEKOMINIKASI WITH FOREIGN
COMPANIES (PMA) IN INDONESIA STOCK EXCHANGE (IDX)

by
Suci Lugita Putri

This study aims to determine whether a foreign telecommunications company's financial performance (PMA) is better than the company's financial performance in the domestic telecommunications (PMDN) using an assessment of the financial ratios used by telecom companies listed in Indonesia Stock Exchange (BEI) the ratio of liquidity with using the current ratio, solvency ratio using leverage ratio, profitability ratios by using the return on investment, and the ratio of market by using price-earnings ratio. The statistical test used was test-u two independent samples Mann-Whitney Test.

From the results of research on telecommunications companies in the country (domestic) and foreign telecommunications company (PMA) show that in the measurement of current ratio (CR), leverage ratio (LR) and return on investment (ROI) of foreign telecommunications companies (PMA) has a better performance better than domestic telecommunications companies (PMDN). While the use of PER measurement, foreign telecommunications companies (PMA) are no better than the company domestic telecommunications (PMDN). Looking at a ratio of 3:1, with a composition of 3 variables reject the hypothesis (Ho) for a foreign company (PMA) is better. It can be concluded that the Foreign Telecommunications Company (PMA) is better than the Domestic Telecommunications Company (PMDN).

Keywords: Current Ratio, Leverage Ratio, Return on Investment, Price Earning Ratio
