The data collection technique used was a non-test technique. This research uses a convenience sampling technique, namely a sampling technique based on the availability of respondents freely according to the wishes of the researcher. The statistical analysis used was the normality test, homogeneity test, N-Gain test, and hypothesis test. The test results show that the hypothesis is accepted, which means that there was an influence of the project-based learning model to improve the creative thinking abilities of class IV students at the Karang Sari State Elementary School for the 2023/2024 academic year.
