

ABSTRAK

PENGARUH JUMLAH LAPISAN TIPIS SILVER NANOWIRES TERHADAP SIFAT OPTIK DAN LISTRIK MENGGUNAKAN METODE MAYER-ROD COATING

Oleh

DEWI PUSPITASARI

Telah dilakukan pembuatan lapisan tipis *silver nanowires* menggunakan metode *Mayer-Rod coating* dengan variasi 1, 2, dan 3 lapisan. Koloid *silver nanowires* disintesis dengan menggunakan metode poliol pada suhu 140 °C. Penelitian ini dilakukan untuk mengetahui sifat optik (transparansi), listrik (resistansi dan konduktivitas), morfologi (sebaran dan ketebalan lapisan tipis *silver nanowires*) dan mekanik yang difabrikasi dengan *mayer-rod coating* di atas substrat *polyethylene terephthalate* (PET). Analisis UV-Vis diperoleh transparansi masing-masing lapisan yaitu 95,57%; 36,99%; dan 31,12%. Analisis I-V meter diperoleh besar masing-masing resistansi yaitu 476,77 Ω; 189,9 Ω; dan 185,14 Ω. Analisis konduktivitas masing-masing lapisan yaitu $0,38 \times 10^{-7}$ Sm⁻¹; $11,1 \times 10^{-7}$ Sm⁻¹; dan $7,1 \times 10^{-7}$ Sm⁻¹. Analisis SEM *cross-section* diperoleh ketebalan masing-masing lapisan yaitu 38,36 μm; 55,65 μm; dan 96,106 μm. Panjang lapisan yang diperoleh masing-masing variasi yaitu $8,81 \pm 5$ μm; $8,20 \pm 2$ μm; dan 4,42 μm.

Kata kunci: *silver nanowires*, lapisan tipis, *mayer-rod coating*, SEM-*cross section*.

ABSTRACT

EFFECT OF NUMBER OF THIN SILVER NANOWIRE LAYERS ON OPTICAL AND ELECTRICAL PROPERTIES USING MAYER-ROD COATING METHOD

By

DEWI PUSPITASARI

Thin layer silver nanowires were prepared by the Mayer-Rod coating method with variations of 1, 2, and 3 layers. Colloidal silver nanowires were synthesized using polyol method at 140 °C. This study was conducted to determine the optical (transparency), electrical (resistance and conductivity), morphological (distribution and thickness of thin silver nanowires) and mechanical properties fabricated by the Mayer-Rod coating on polyethylene terephthalate (PET) substrate. UV-Vis analysis obtained the transparency of each layer, which is 95,57%; 36,99%; and 31,12%. I-V meter analysis obtained the amount of each resistance of 476,77 Ω; 189,9 Ω; and 185,14 Ω. The conductivity analysis of each layer is $0,38 \times 10^{-7}$ Sm⁻¹; $11,1 \times 10^{-7}$ Sm⁻¹; and $7,1 \times 10^{-7}$ Sm⁻¹. SEM cross-section analysis obtained the thickness of each layer is 38,36 μm; 55,65 μm; and 96,106 μm. The length of the layer obtained for each variation is $8,81 \pm 5$ μm; $8,20 \pm 2$ μm; and 4,42 μm.

Key words: silver nanowires, thin layer, mayer-rod coating, SEM-cross section.
