This study aims to examine the effect of digitalisation on non-performing loans and banking fee-based income. This test uses SPSS version 26 which is carried out both simultaneously and partially. The population in this study were commercial banks listed on the Indonesia Stock Exchange (IDX) during 2018-2022 with a total sample of 52 companies. This study uses multiple regression analysis as an analysis method. The results of this study indicate that simultaneously mobile banking transactions and information technology investment have a significant effect on the level of non-performing loans and fee-based income. Partially, mobile banking transactions have a significant negative effect on non-performing loans, but investment in technology and information has no effect on non-performing loans. In addition, mobile banking transactions and investment in technology and information have a significant positive effect on fee-based income.

Keywords: Mobile Banking, Investment in Technology and Information, Non Performing Loan, Fee Based Income.
